

Snap-in Push Button ST40

The ST 40 is a robust, high quality and multilateral applicable mid size push button, which is easy to assemble and has a universal design.

Our dual illumination version features a continuously illuminated button, and the luminosity enhances or changes for acknowledgement of the call in the colours red (standard), green and blue.

The ST 40 is independent of the push plate, with illuminated symbols available, and is subject to various regulations for the international use in elevators.

The ST 40 button aligns flush with the panel and operates with a smooth touch. The assembly attaches easily through a simple snap into the push button cut-out.

The electrical connection uses classic

screw connectors or highly approved MicroMaTch pluggable connectors.

The chassis and the push mechanism are extraordinarily robust and very resistant to vandalism.

The ST 40 can be perfectly integrated with the modules of the Kollmorgen Shaft Bus into the landing fixtures.

Drawings & Dimensions

ST 40

Design	Snap-in mid size push button
Construction	Diagonal of the push plate 40 mm; square
Colours	red (standard) / blue / green
Illumination	Optional dual illumination
Connector	Screw connector / MicroMaTch pluggable connector
Excitation	Common cathode / anode
Voltage	12 volts / 24 volts (standard)
Mounting	Snap-in mounting
