

## Snap-in Push Button type ST40 R

Kollmorgen's ST 40 R circular, mid-size push button is defined by its ease of installation and its universal design, suiting many applications. This push button can be easily installed by inserting, then engaging the main housing into the cut-out of the push cover plate.

The required push plate diameter is 32 mm. ST 40 R is available in either an engraved stainless steel finish or as a tactile version according to EN 81-70 and DDA, with audible call acknowledgement,

dual-illumination, with also a raised "main floor" push version available.

Call acknowledgement colour options are red, green, and blue, with dual illumination versions as well (only with common cathode). Electrical connection is either by conventional screw terminals or by proven pre-configured MicroMatch pluggable connectors. ST 40 R can be also easily integrated by using the appropriate Kollmorgen ETG Shaft Bus modules or by conventional hard-wiring.

Our dual-illumination version features a continuously illuminated surround which either intensifies in brightness or changes colour to acknowledge a call. Available colours are red (standard), green, blue or white.

# Drawings & Dimensions

ST 40 R
